

Bustracks Student Transportation Software™ saves school districts money with easy-to-use bus route analysis.

Bustracks designs effective, efficient bus routes. The right routes.

Are your current bus routes the **best** routes for your pupil requirements? With a nationwide map and proprietary GPS Plus tracking system, Bustracks offers a powerful one-two punch for easy bus route analysis. Do routes overlap? Are you fully utilizing the bus capacity on each run? Do multiple buses serve stops on the same road? Bustracks solves these problems and more.

Bustracks Student Transportation Software™ allows you to analyze your bus routes so you can create the RIGHT routes. This could pay big dividends to your district. Consider the following:

- District "A" reroute analysis using Bustracks resulted in a reduction of 1,260 rider minutes per day, two fewer buses, a reduction of over 95,000 miles per year, and, for the first time in the district history, all schools were on the same bell schedule.
- District "B" reroute analysis using Bustracks resulted in a reduction of 582 rider minutes per day, two fewer buses, a reduction of over 43,000 miles per year, and a revised bell schedule that greatly reduced the number of minutes the elementary students rode the bus.
- District "C" considered grade-level learning centers. Using Bustracks, four alternate proposals were developed, alternate boundaries lines were created and two alternate bus route scenarios were developed. The final reroutes supported the learning center requirements and resulted in a reduction of 680 rider minutes per day, two fewer buses, a reduction of over 47,000 miles per year, and a revised bell schedule that has all elementary students on the same bell schedule.

Because every minute counts.

Every minute a bus travels costs time and money. Bustracks makes each minute count by displaying routes on a single map; optimizing routes using actual stop locations; refining alternate route proposals; and automatically reassigning students to their new routes.
