

Bustracks GPS Plus™ key fob makes it easier for driver AND transportation manager.

Pennsylvania school districts are discovering the benefits of using GPS technology for tracking their school bus routes and stop locations. But with the ever changing technology and multitude of systems on the market, it is difficult to know which product is the best for the job.

BusTracks Transportation Management Services™ took a different approach to answer this question. First, they determined the typical requirements for using GPS. This includes tracking the following:

- Date / Time
- Location of bus
- Speed of bus
- Location of bus stops

One additional requirement for PA districts is to capture bus miles traveled with and without riders.

BusTracks solves all these requirements with the Bustracks GPS Plus™ vehicle tracking system.

Bustracks GPS Plus tracks bus speeds, dates, times, and stop locations PLUS captures specific route miles (including with and without riders) without manually recording the odometer readings. When linked with Bustracks Student Transportation Software™, there is no need to manually enter odometer readings in a separate data base; this is done automatically.

In addition, Bustracks GPS PLUS allows you to create and optimize your routes using actual stop locations. All data easily displays on a nationwide map for confirmation and clarity of routes.

To find out how Bustracks Transportation Management Services can work for you, please call **1-800-303-2921** or visit us at **www.bustracks.com**.

To learn more about us, stop by our booth #237 at the 55th Annual PASBO Conference on March 9-11, 2010 at the Hershey Lodge and Convention Center in Hershey, PA.
